

# Sentinel-2 Mission: Observation scenario, products and mission status

Bianca Hoersch, Sentinel-2 Mission Manager,  
on behalf of the S2 team

## Mission profile

- ❑ **Two** Spacecraft operating in twin configuration
- ❑ Sun-synchronous orbit at **786 km**, **LTDN** 10:30 AM
- ❑ Multispectral instrument with **13** spectral bands (**VIS, NIR & SWIR**), at **10, 20** and **60 m** spatial resolution
- ❑ **290 km** swath width
- ❑ **5 days** repeat cycle at Equator (cloud free) with 2 satellites
- ❑ **7 years** design life time, consumables for 12 years

# 13 Spectral bands

# Comparison Sentinel-2/Landsat-8 spectral bands

- 1. Top-of-atmosphere (TOA) radiances in sensor geometry**
- 2. Image radiometry key features**
  - a. Radiometric corrections include: dark signal, pixel response non-uniformity, defective pixels interpolation and restoration (deconvolution + denoising).
  - b. Radiances coded in 12 bits.
- 3. Image geometry key features**
  - a. Coarse registration between bands and between staggered detectors (no resampling).
  - b. Includes a refined geometrical viewing model calculated using a GRI (Global Reference Image).

# Level-1B: Product Example

290 km swath

Granule

23 km

25 km

Along satellite-track

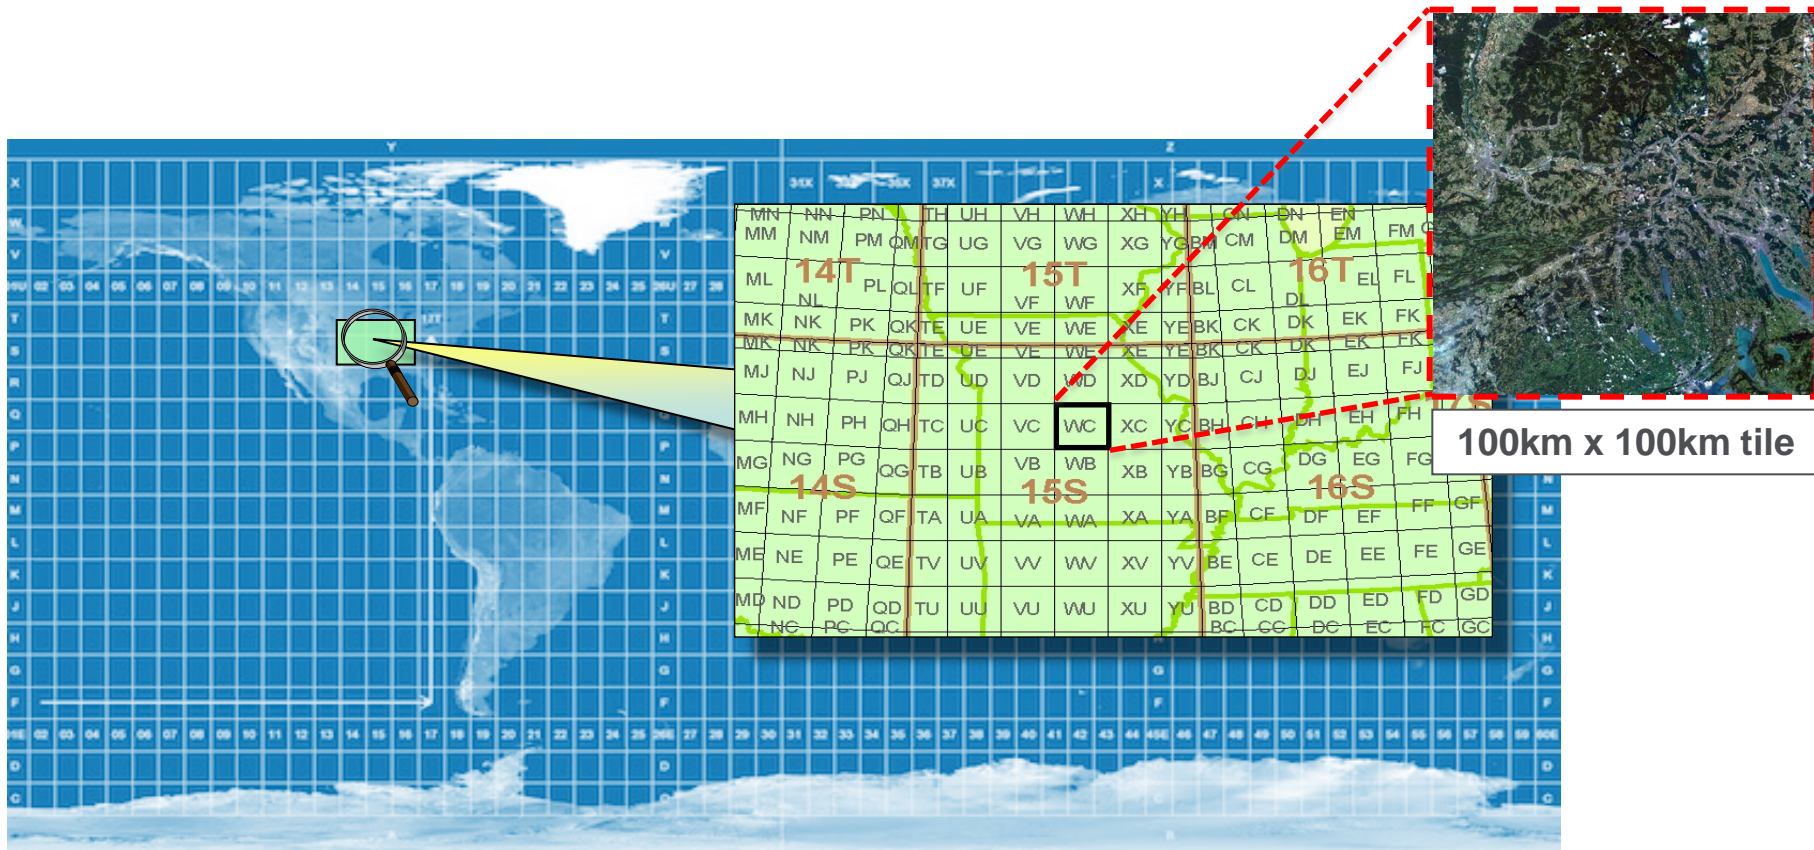

- Top-of-atmosphere (TOA) reflectances in cartographic geometry
  - ✓ Projection UTM / WGS84.
- Image radiometry key features:
  - ✓ Reflectances coded in 12 bits.
  - ✓ Product includes all necessary parameters required to convert the provided reflectances into radiances.
- Image geometry key features:
  - ✓ Orthorectification uses an 90m-resolution DEM (PlanetDEM).
  - ✓ Sub-pixel multi-temporal registration between images.

# Level-1C / Tiling

- Cartographic Reference System: UTM (with  $6^\circ \times 8^\circ$  grid zones).
- Each grid zone is split into  $\sim 100 \times 100 \text{ km}^2$  UTM "Tiles".

# Level-1C / Data Quality Targets

Radiometric Data Quality	
Absolute radiometric uncertainty	3 % (goal) , 5 % (threshold)
Inter-band relative radiometric uncertainty	3%
Linearity knowledge accuracy	1%
Modulation Transfer Function (MTF)	0.15 to 0.3 (for 10m bands) <0.45 (for 20 & 60m bands)
Geometric Data Quality	
Absolute geolocation uncertainty	20m $2\sigma$ (threshold) 12.5m $2\sigma$ (goal) with GCPs
Multi-temporal registration	0.3 pixel $2\sigma$ (goal) with GCPs
Multi-spectral registration (for any couple of spectral bands)	0.3 pixel $3\sigma$

- 1. Bottom-of-atmosphere (BOA) reflectances in cartographic geometry (UTM/WGS84).**
- 2. Products additionally include:**
  - a. Scene Classification Map
  - b. Water Vapour Map
  - c. Aerosols Optical Thickness Map
- 3. Algorithm includes:**
  - a. Cloud and cloud shadow detection.
  - b. Cirrus detection and correction.
  - c. Slope effect correction.
  - d. BRDF effect correction.

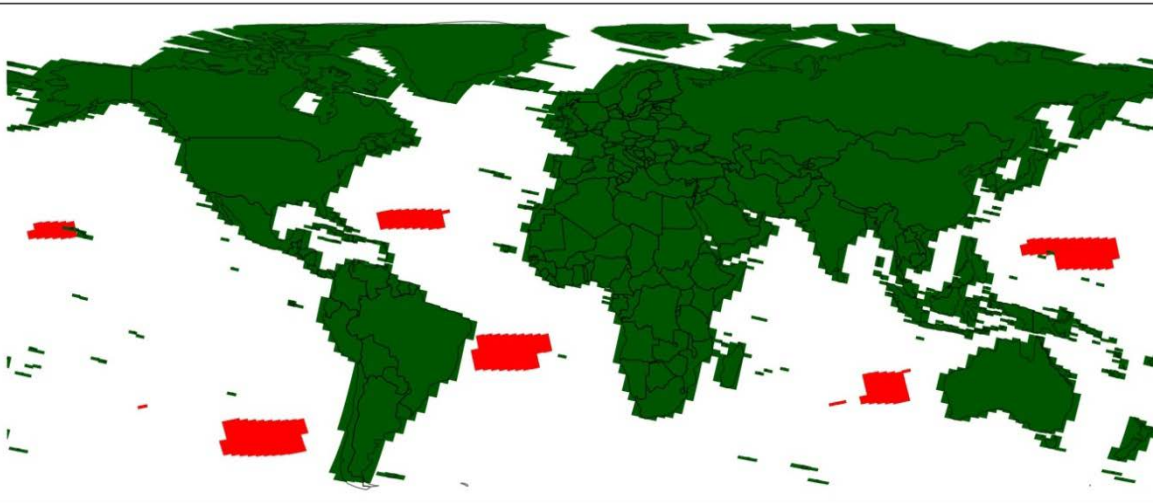

# S2 Products Summary

Name	High-level Description	Production	Preservation Strategy	Volume
<b>Level-1B</b>	Top-of-atmosphere radiances in sensor geometry	Systematic	Long-term	~27 MB (each 25x23km <sup>2</sup> )
To be available via the same mechanisms as Sentinel-1, see previous talk of P. Potin et al.				
<b>Level-1C</b>	Top-of-atmosphere reflectances in cartographic geometry (UTM/WGS84)	Systematic	Long-term	~500 MB (each 100x100km <sup>2</sup> )
<p><i>This product is initially offered as part of the Sentinel-2 toolbox:</i>  <a href="https://earth.esa.int/web/sentinel-tbx/sentinel-2-toolbox">https://earth.esa.int/web/sentinel-tbx/sentinel-2-toolbox</a>  <i>On user side</i>  <b>Level-2A</b> Bottom-of-atmosphere reflectances in cartographic geometry  <i>Sentinel-2 Toolbox</i>            The possibility of a systematic global production of L2A is currently being explored            600 MB (each 100x100km<sup>2</sup>)</p>				

# S2 nominal observation plan

## EFFECTIVE COVERED AREA AT THE END OF THE RAMP UP PHASE (FULL OPERATIONALITY)

derived from simulated swath - cleared for lead in/out datatakes

### Legend

Acquisition Area

■ Regular

■ Calibration Purposes (outside the regular acquisition area)

Baseline in full operations is systematic acquisition of:

- ✓ All land surfaces ( $-56^{\circ}$  and  $+84^{\circ}$  latitude);
- ✓ Major (greater than 100 km<sup>2</sup> size) and EU islands;
- ✓ Coastal (20km off the coast)
- ✓ inland waters, Mediterranean Sea and all closed seas;
- ✓ Cal/Val sites: see next slides

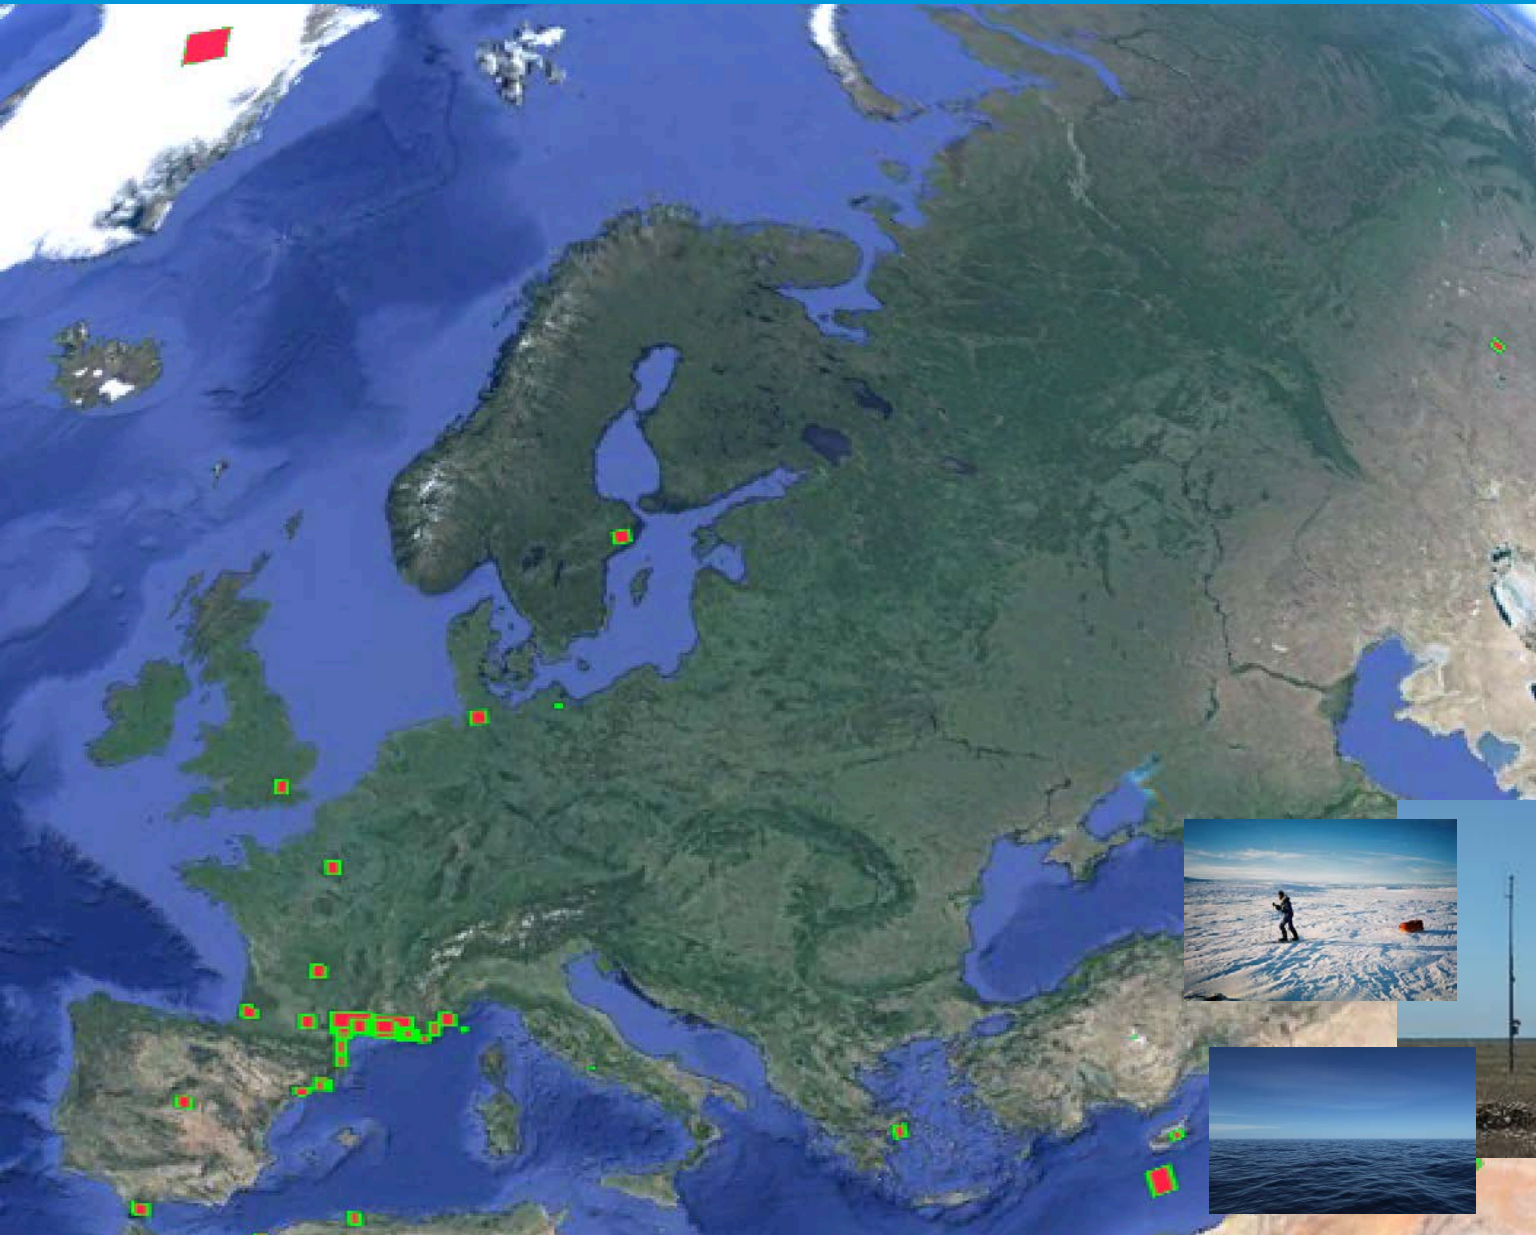

# *S2 nominal observation plan*

European Space Agency

# Refined S2 cal/val sites Europe-Africa

# Refined S2 cal/val sites Americas

# Refined S2 cal/val sites Asia/Australia

## *Sentinel-2 ramp-up – under definition*

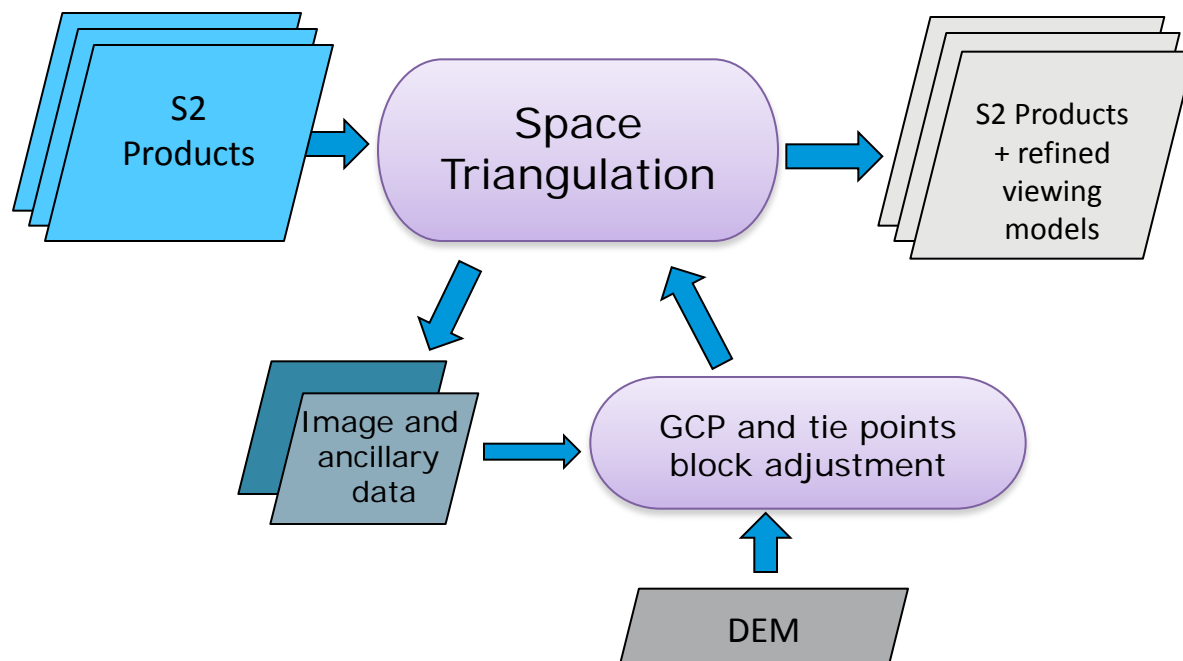

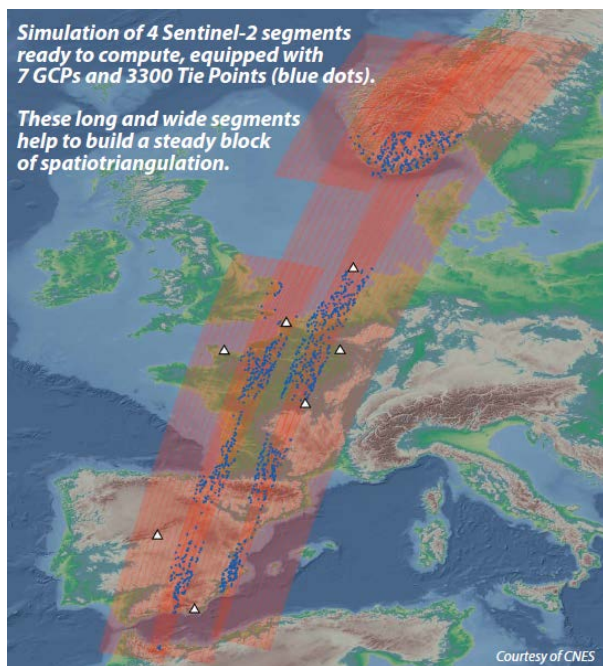

Like for Sentinel-1, a gradual ramp-up is being defined for Sentinel-2, increasing/improving gradually the observations plan and performance level in a stepwise approach

- Gradual increase of acquisition capacity from a reduced observation/processing scenario to full systematic observation
- Ensuring coverage of global Cal/Val needs
- Ensuring as early as possible COPERNICUS dataset needs
- Ensuring maximum coverage/orbit length for generation of a global reference image (GRI), which is required to produce high accuracy L1C products...this may take up to  $\pm 9$  months to produce

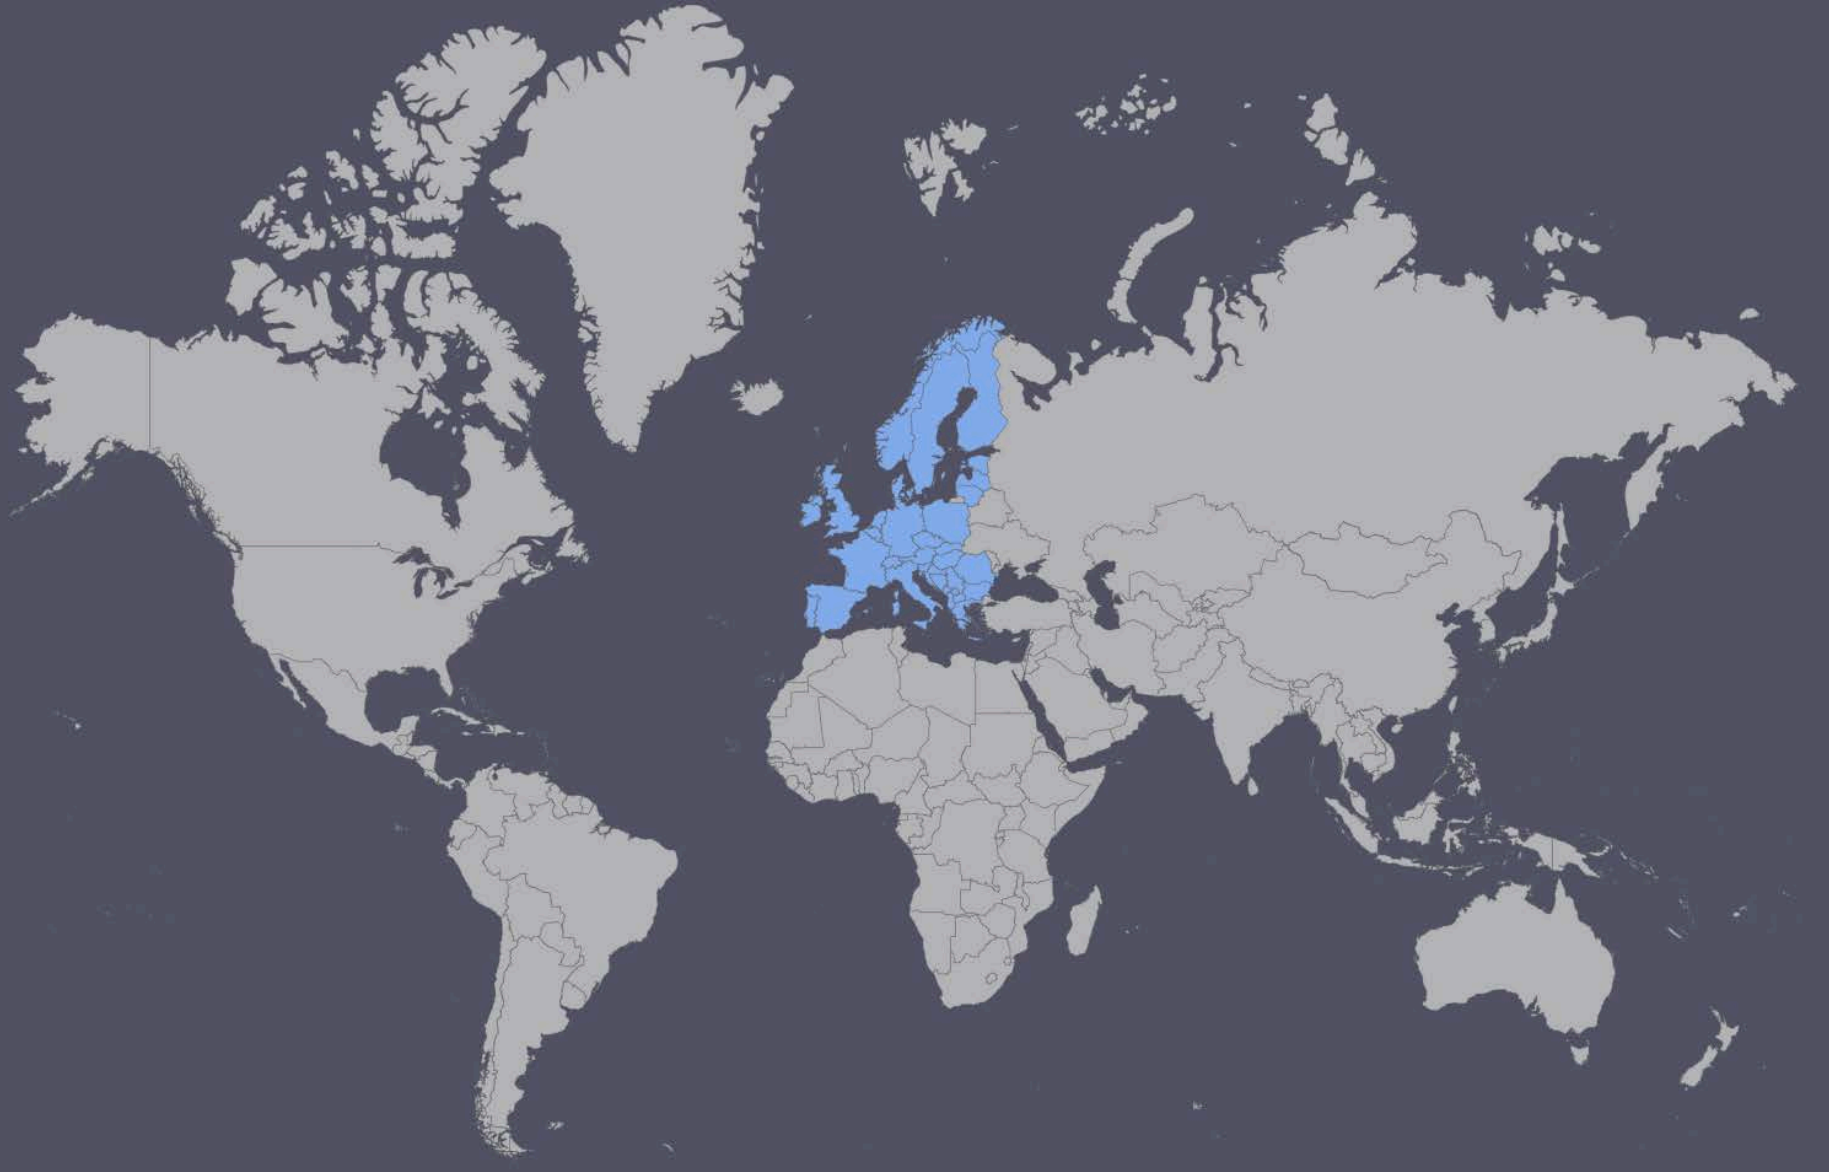

# Global Reference Image (GRI) Generation

- **Objective:** To obtain a full repeat cycle dataset of well-localized mono-spectral Level-1B images (band 4, red) which will be used as reference images in the processing chain.
- **Methodology:** Massive spatio-triangulation on multi-continental blocks (starting with Europe-Asia-Africa block).
- **GRI** planned around Launch + 9 months.

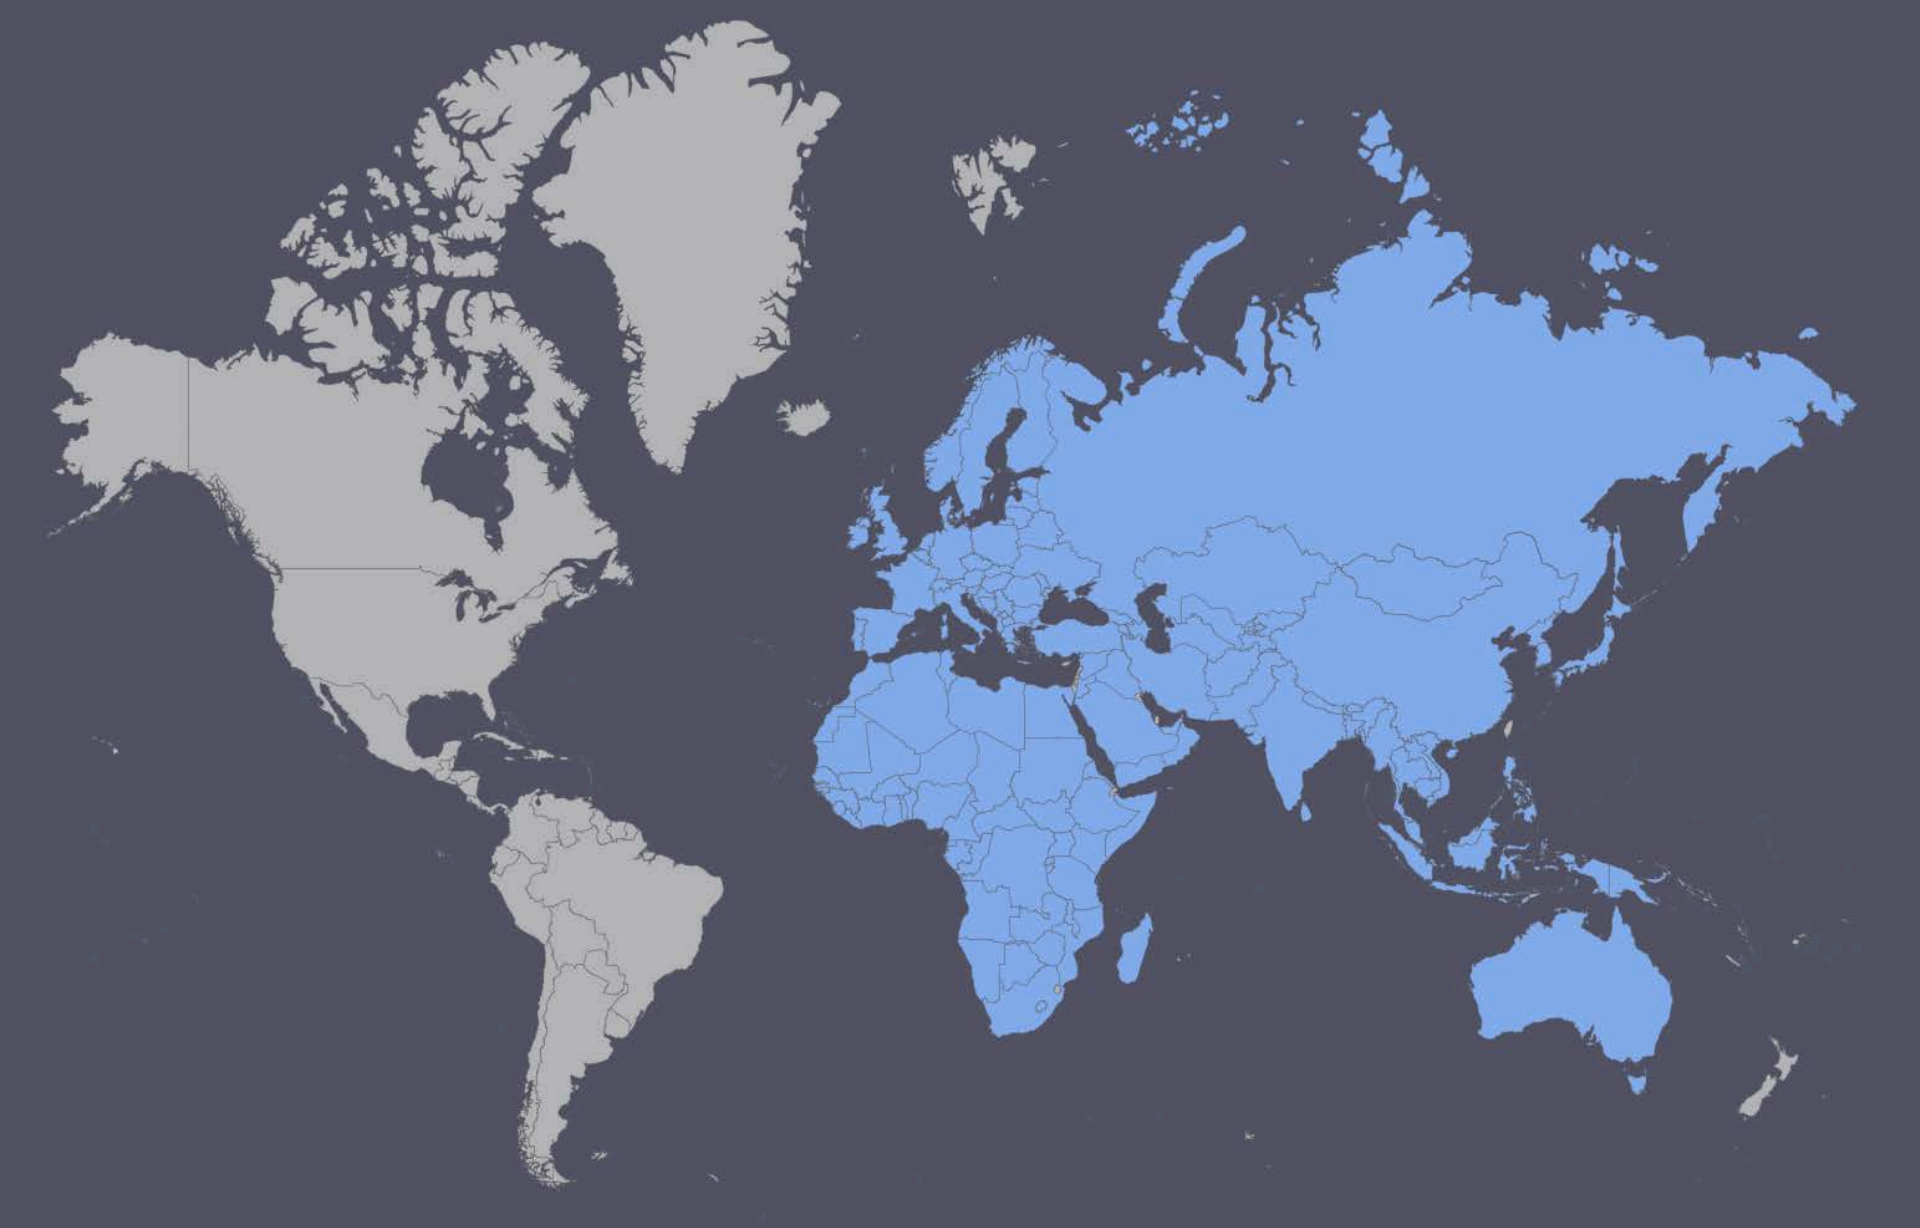

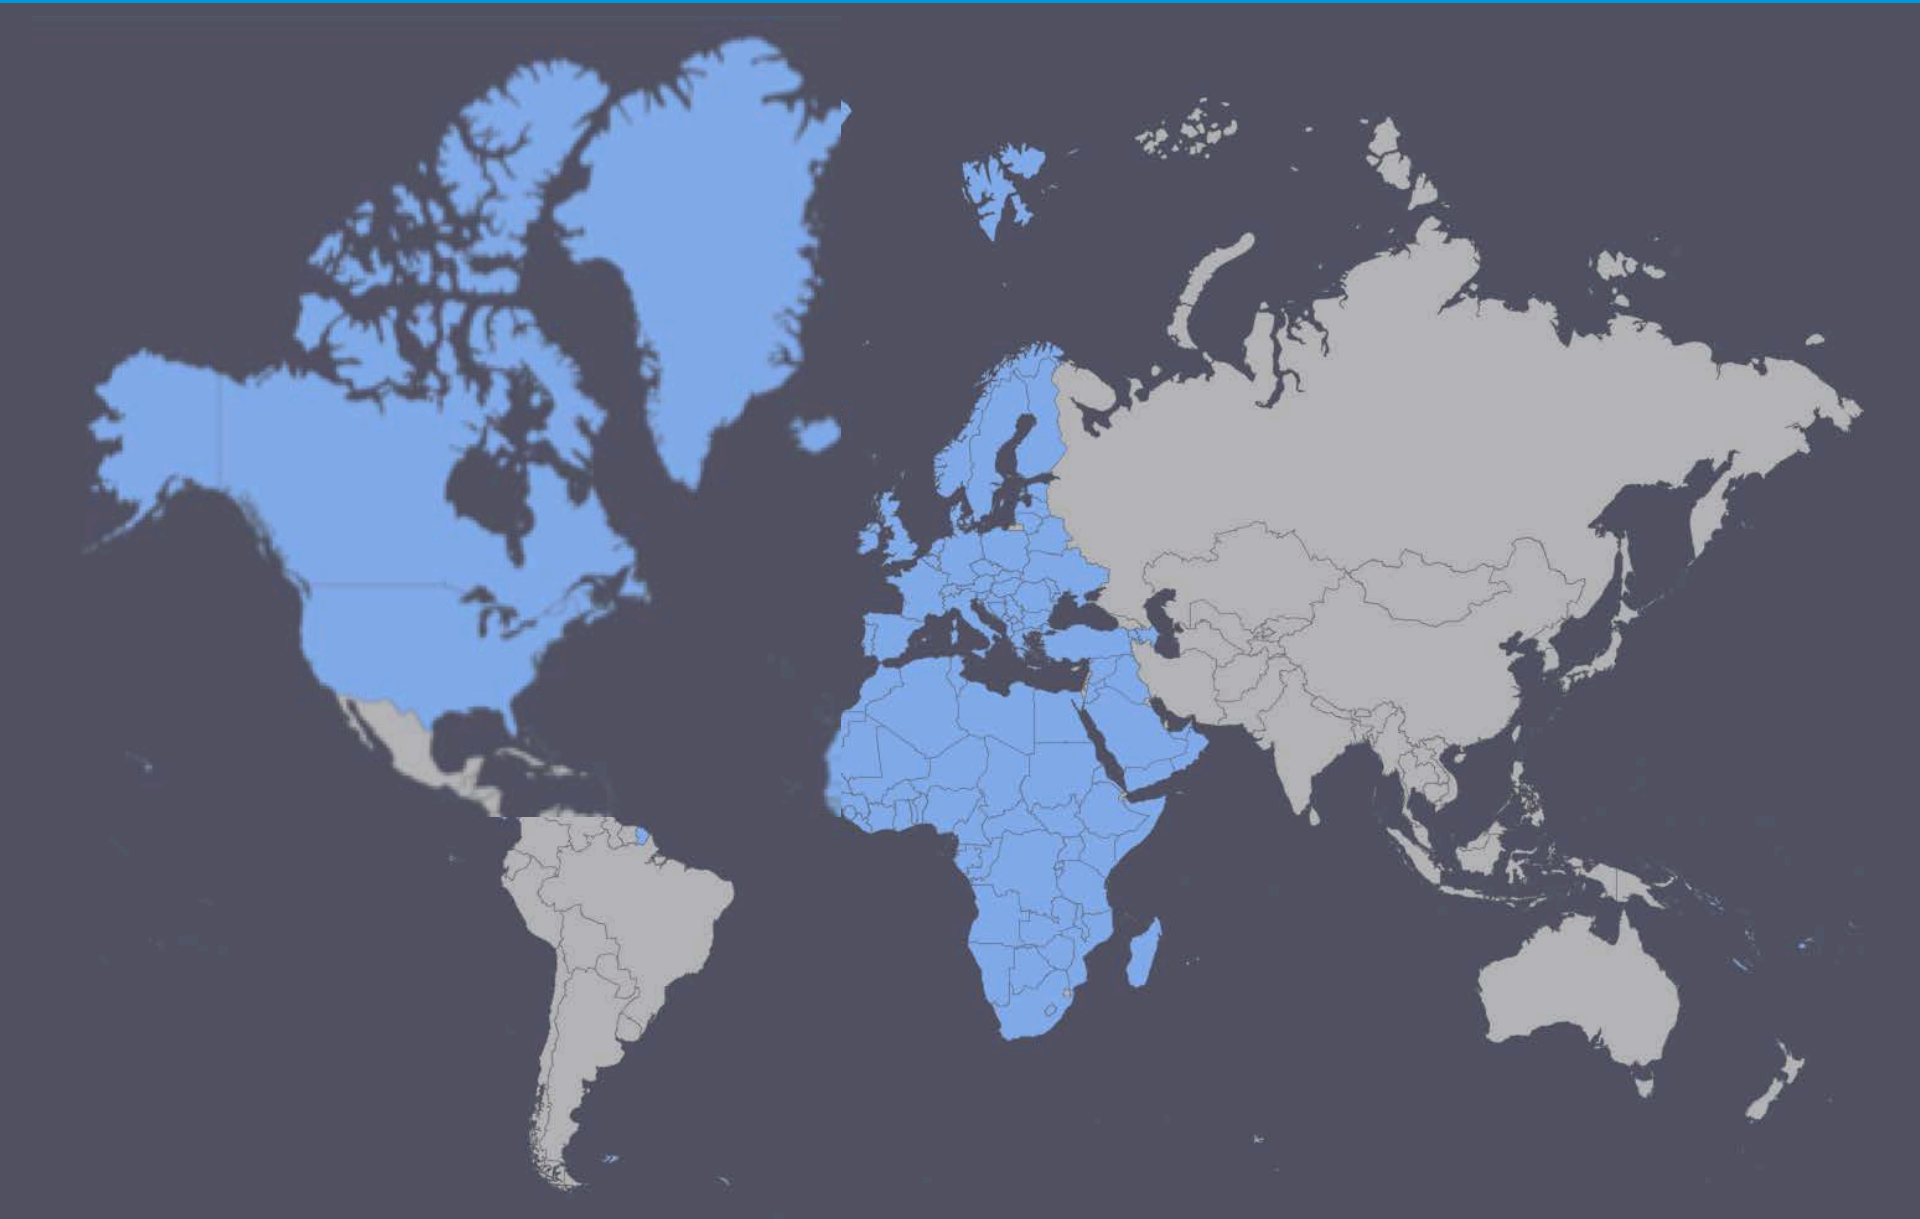

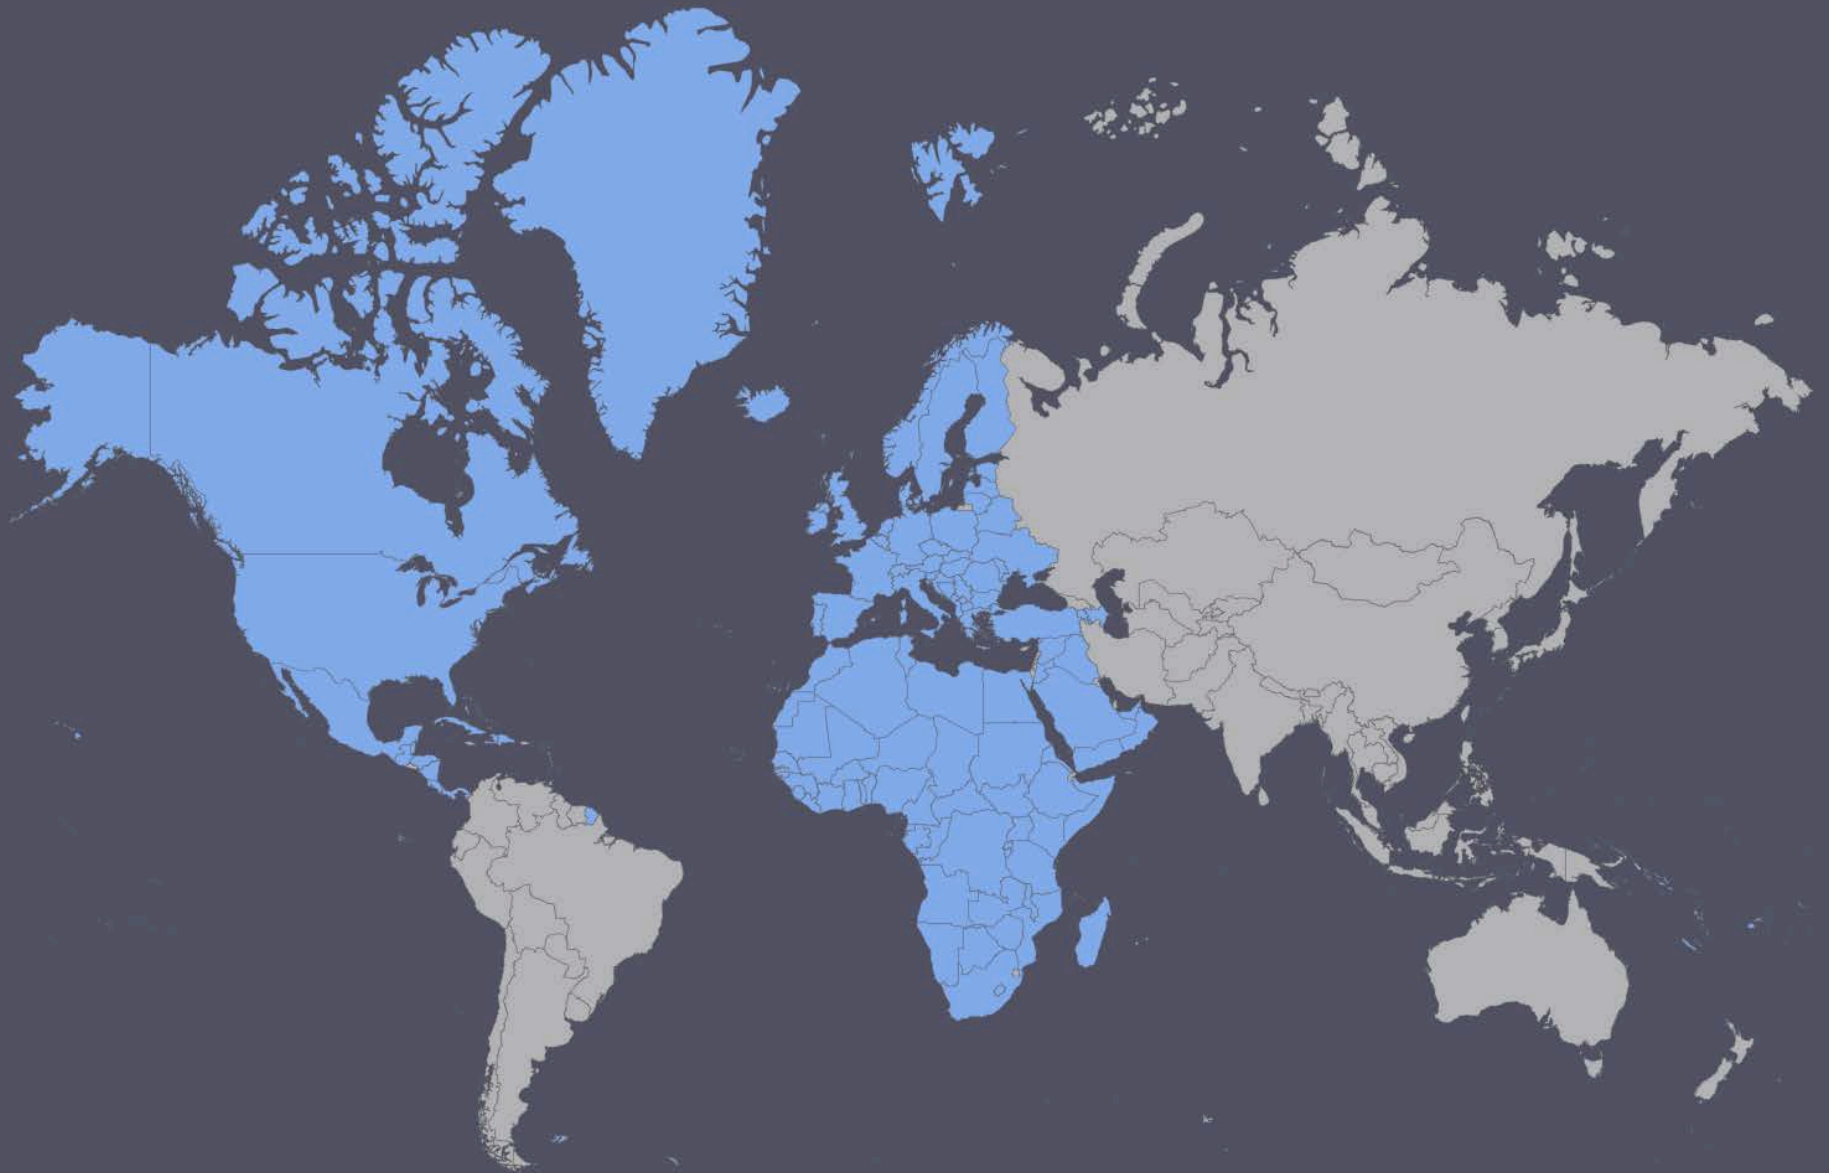

# Possible switch to Americas (North)

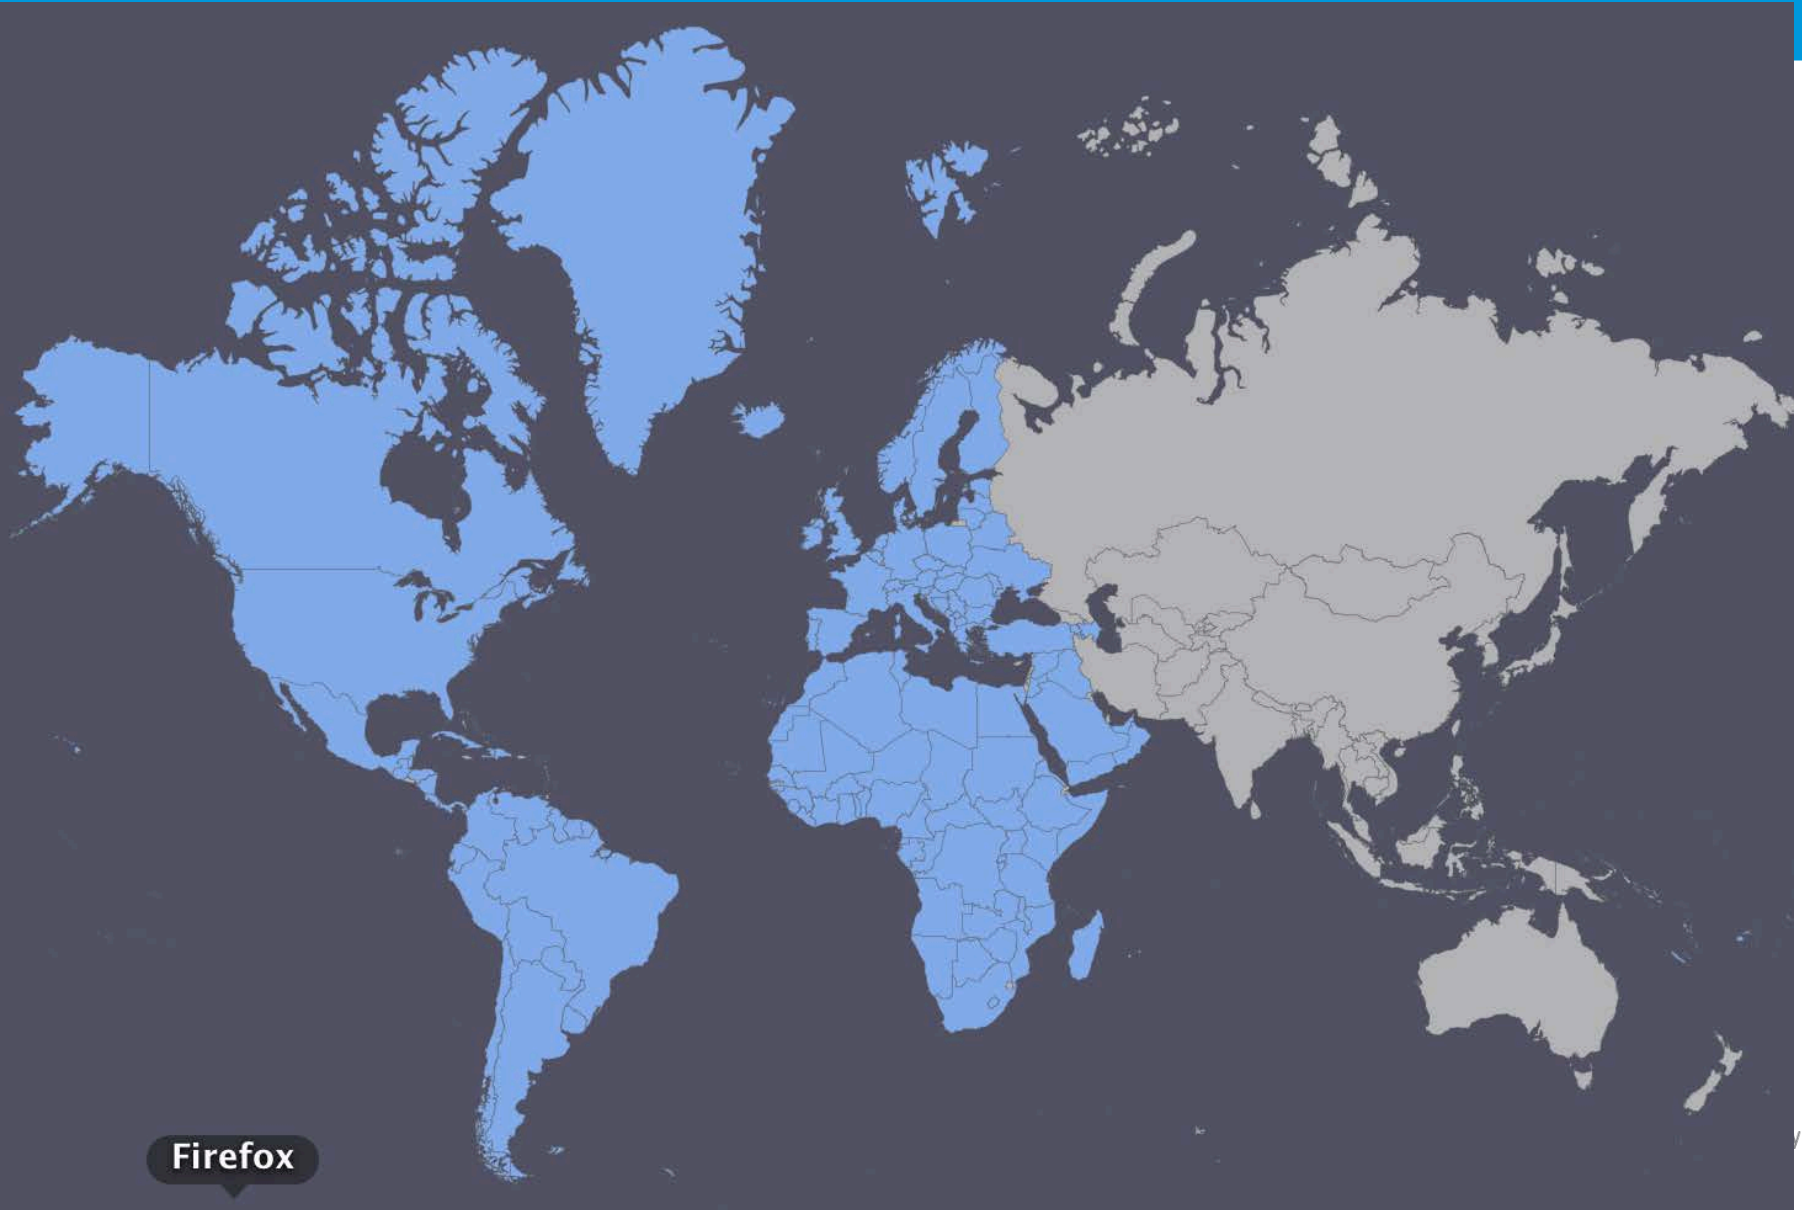

# Possible switch to Americas (North, Central)

# Europe with Superblock 2 (North, Central, South America)

# Potential intermediate or alternating scenarios (systematic non-global)

# Potential intermediate or alternating scenarios (non-systematic)

European Space Agency

FINAL

# Uniqueness of Sentinel-2

1. Systematic acquisition of all land surfaces and coastal waters.
2. High revisit frequency (5 days periodicity, same viewing direction).
3. Large swath (290km).
4. High spatial resolution (10m / 20m / 60m).
5. Large number of spectral bands (13 in VNIR-SWIR domain).
6. Level 1B and Level 1C data will be available just like S1, free and open:

# Close to launch

Courtesy: Airbus Defense and Space

**Current assumed launch date:**

**12 June 2015 for S2A, launch readiness for S2B in June 2016**

Thank you
